# Subtransaction information vs General processortime info

What is the impact of the processor usage on the user experience?

# Subtransaction information vs General processortime info

If the processor usage is between 60% and 80% the machine will slow down, above 80% this is even more.

Subtransaction information vs General processortime info

Only the values between the 5th and 95 th percentile are shown of the "Open file" action.
An average of the values of every 60 seconds are shown.

Subtransaction information vs General processortime info

96% of the test the response time was Excellent and only after 1 hour and 15 minutes the users would rate the response time somewhere between Good (2.7%), Fair (0.6%), Poor (0.4%) or Unacceptable (0.4%).
